

...Science meets scuba diving....

Frequently asked questions:

Q. What is Salclear e-drops?

A. It's a simple treatment for trapped water in the exterior ear canal.

Q. How does it work?

A. Salclear e-drops works by dispersing the individual water droplets. In part it breaks the surface tension of the droplet, causing it to spread and flow. It also enhances evaporation of the trapped water . So it works by two individual mechanisms

Q. What is so different about Salclear e-drops?

A. We've created a product specifically to meet the needs of the sports, leisure or professional diver.. people who might have to use such products regularly. We've formulated the product so that it can be used more frequently and with less associated discomfort - or 'burn'.

Q. When and how should the product be used?

A. The product is designed for use after your dive. Simply squirt a few drops into each ear canal, and if the water is not dislodged immediately, gently massage the outer ear from beneath the outer lobe.Reapply and repeat the process if required. We would strongly advise not to use if suffering from any ear abnormalities, infections or discomforts at the time.

Excellence through Innovation.....
