How to Use Salclear E-drops

Ear deblocker/dewatering aid

Salclear E-drops is our own proprietary formulation for assisting swimmers and scuba divers in clearing trapped water from their outer ear canals.

Simply place a few drops directly into each ear canal by tipping the head to one side and applying a few droplets of Salclear E-drops.

Massage the ear gently and tip the head from side to side, in order to improve agitation and miscibility with the water that is trapped in the outer ear.

Dry the fluid from the ear by dabbing with a soft dry towel or tissue.

Repeat the process as required for both ears.

How it works.

Salclear E-drops represents a step forward in dewatering agents for scuba divers. The product has been formulated to gently clean the ear as well as to remove trapped water.

An additional benefit is that E-drops does this without the severe burning sensation when using other similar alcohol based formulations.

... all the benefits without the pain!

Salclear is the leading quality brand in the dive industry. Our products are engineered for their specific purpose without compromise on properties, performance or value.
