How to Use Salclear AquaSport

Antifog, Mask and Slate cleaner, general cleaner for hoses, valves, diving suits, gauges etc lubricant and zip care

..... all these properties in one product – a world first!?

1. Antifog and Mask Cleaner

Salclear AquaSport is a powerful antifog and cleaning aid for goggles and scuba masks.

In order to clean new masks and remove residual oil and grease deposits accumulating during the manufacture of the mask, or to regularly clean masks after each dive, Salclear AquaSport should be spray applied to both the inner and outer faces of the dive mask lens.

Wipe the mask gently inside and out with a soft dry or preferentially damp cloth. Reapply and repeat if necessary.

Test the clarity of the lenses by examining closely under different angles of light. Breathe on the lenses inside and out to check antifog characteristics.

If there is smearing of dirt or patches of the glass surface that have been missed, repeat the application process.

Salclear AquaSport will dissolve and remove most oil and water based residues from the surface of the mask lens.

As an antifog, spray apply Salclear AquaSport to the dry inside of the mask lens prior to entering the water. Rub aggressively over the whole of the surface of the lens. Preferentially leave for 1-2 minutes, then swill the mask once with cold salt or fresh water.

Salclear AquaSport will resist being washed away during the course of a days dive if the mask is completely immersed in water. If however the mask is repeatedly wetted inside, or left immersed for a few minutes, it may be necessary to reapply.

One application of Salclear AquaSport is all that is normally required in order to keep the mask fog free

over multiple dives. The product will work indefinitely unless it is washed repeatedly in water.

Our tests have demonstrated that Salclear AquaSport is the leading product on the market today in resisting fogging whilst being suspended in a constant source of steam. It is also a more powerful cleaning aid than most household glass and kitchen cleaning products on the market.

2. Slate and General Cleaning fluid

Salclear AquaSport betters any dedicated product currently available, and is well suited to cleaning dive slates, hoses, valves, marks on diving suits and dirt from other associated dive gear.

Simply spray our product on to the surface to be cleaned, leave for one minute and then wipe clean, or rub more aggressively with a dampened cloth. Repeat if required.

Salclear AquaSport is safe to use on plastics, rubbers, metals and textile fabrics. It takes pencil marks off dive slates, dirty spots and marks off dive suits and dissolves dirt and grim deposits from other dive gear.

3. Zip Care

The cleaning and lubrication of your dive suit zippers, or dive gear zippers, is important in maximising the working operation and lifetime of the zipper.

Rinse the dive suit after use with cold fresh water. Salclear AquaSport should be spray applied to the inner and outer surfaces along the whole length of the zipper.

The zipper should be gently brushed with a toothbrush or short soft bristled brush.

The zipper should then be wiped with a damp or soft dry cloth, and the zipper closed for storage.

It is recommended that users choose their zip maintenance products with care. Our tests have shown that some market leading products readily dissolve in water, or dry quickly to a flaky residue. Worse still in some products the lubricity itself is not great.

Similarly well known wax based products – whilst ensuring initially a free action of the zipper – can be over applied leading to excessive residues on the zipper which can clog up the mechanism as well as attract organic dirt deposits.

Salclear AquaSport is the product of choice. Eliminating the corrosive effects of salt water, providing superior lubricity to the zipper, and slowly dissolving in water taking accumulated dirt and soils with it.

Use Salclear AquaSport every time you finish your dive and your zipper should remain problem free.

Salclear AquaSport is the leading quality brand in the dive industry. Our products are engineered for their specific purpose without compromise on properties, performance or value.
