Salclear Saniscube – Kills bugs and stuff!

Salclear has recently launched Saniscube a companion product to its established Scuba and watersports detergent concentrate cleaner Scubasoap.

The products when used together provide a first class programme for desoiling and sanitising your divegear. Wetsuit, BCD, snorkel and regulator mouthpieces, gloves, hoods... the lot.

Salclear Saniscube is able to rely on lower levels of active ingredients than commonly used, due to its new formulation's revolutionary method of delivering diluted disinfectant to the cells of microorganisms.

The product is targeted at penetrating the microorganism cell walls, yet is inhibited from penetrating skin by cells that are not present in microorganisms but are present in humans and animals. This new system therefore presents a lower risk to users.

The combination of polymeric and natural and synthetic quaternary compounds produces a very fast acting and effective disinfectant. Salclear Saniscube works up to 70% quicker than conventional high level disinfectants and achieves cell death rather than merely suspending activity as with conventional disinfectant products.

Independent lab. testing demonstrates no corrosion or deterioration of the following materials even in long term repeated immersion tests: rubber compounds, plastics, fibreglass, stainless steel, mild steel, aluminium, copper, brass.

Salclear Saniscube has been tested against an extensive portfolio of microorganisms giving first class mycobactericidal, virucidal, sporicidal, bactericidal and fungicidal activity.

At dilutions of 1:200 Salclear Saniscube provides a truly broad spectrum activity and potent general purpose sanitisation for all scuba and watersports kit.

So... safe for regular use, safe to used on all your watersports equipment, and powerful disinfection too!
