How to Use Salclear Visorprep

New and used Visor Preparation

Salclear Visorprep has been created to meet the demanding needs of the motorbiker in preparing new visors or clean and degrease older ones.

The preparation of a new visor is critical in rendering the surface receptive to other cleaning agents and antifogs, and without a clean surface a new visor will readily fog up.

Salclear Visorprep does away with the need for other abrasive type cleaning fluids, or the prolific use of tooth paste and scouring products. Such products in our opinion harm the surface of the visor by creating microscratches which damage the surface and aggravate fogging.

For old or used visors, wash the visor in very hot warm soapy water, and towel dry with a clean non abrasive towel or tissues.

To use Salclear Visorprep simply place a few drops of liquid onto the interior and exterior surfaces of the visor

Rub gently with a soft microfiber cloth or tissue for 30 seconds to one minute.

Wipe the surfaces clean with a dry non abrasive cloth or tissue.

Repeat the process until all of the fluid is consumed.

Next, spray apply Salclear TT visor antifog and cleaning fluid, or apply Salclear DMist+

to the inner and outer surface of the visor and wipe again with a clean, soft, dry cloth or tissue.

Finally, apply one of our anti fogs (TT, DMist+ or DMist) to the inner surfaces of the visor, rub well throughout with a soft cloth and buff lightly.

Your visor should now be silicone oil free, clean and prepared for the first use without the worry of fogging problems.

As a word of caution, we have noted that the cleanliness of a visor greatly affects how readily it fogs. A clean visor fogs much less readily than a dirty one.

The use of Salclear Visorprep in combination with one of the Salclear anti fogs gives an unparalleled level of fog resistance for the motorbiker.

Salclear Visorprep and Salclear motorbiking anti fogs are the leading quality brands in the motorbike industry. Our products are engineered for their specific purpose without compromise on properties, performance or value.
